

Digital Loan Application and Approval System

Business Requirements Document

Prepared by: Abdullah Derbashi

Role: Business Analyst

Version: 1.0

September 2026

1. Document Purpose

This BRD defines the business needs, scope, stakeholders, and high-level requirements for a simulated Digital Loan Application and Approval System. It supports subsequent workflow design, user stories, Jira planning, data analysis, and reporting.

2. Project Overview

The case study centralizes a personal-loan application journey from draft and submission through document readiness, review, decision recording, communication, and operational reporting. It does not represent a real bank, product, policy, or customer dataset.

3. Business Problem

Disconnected tracking can produce incomplete cases, unclear ownership, delayed follow-up, inconsistent decision records, and limited visibility into queue aging and turnaround time.

4. Project Objectives

- Centralize applications, document status, decisions, and history.
- Improve completeness checks, assignment visibility, and queue management.
- Define consistent decision reasons and measurable operational KPIs.

5. Project Scope

- In scope: application capture, document checklist, assignment, review, decision recording, audit history, requirements, simulated data, and reporting.
- Out of scope: production development, bank integrations, real scoring or policy decisions, and real confidential data.

6. Stakeholders

Stakeholder	Role	Key Needs	Influence
Lending Business Owner / Management	Strategic decision making	Application volumes, turnaround time, decisions, and exceptions	High
Loan Operations Team	Application intake and document follow-up	Centralized case status and ownership	High
Loan Officers	Application review and decision recording	Complete application package and decision controls	High
Lending Manager	Workload and escalation oversight	Queue aging, assignments, and service-level visibility	High
Customer Service Team	Applicant communication	Clear status and next action	Medium

Stakeholder	Role	Key Needs	Influence
Loan Applicants	Personal-loan application submission	Simple journey and timely updates	Medium
Business Analyst	Requirements and process analysis	Agreed process, requirements, and data definitions	High
Data Analyst	Reporting and performance analysis	Reliable simulated data and KPI definitions	Medium

7. Business Requirements

ID	Business Requirement	Business Value	Priority
BR-01	Maintain a centralized record for every loan application.	Reduces duplicate records and improves traceability.	High
BR-02	Track the application lifecycle from draft through final decision.	Provides clear case status and accountability.	High
BR-03	Manage required documents and identify missing information.	Reduces incomplete submissions and review delays.	High
BR-04	Assign applications to loan officers and monitor queue aging.	Improves workload visibility and turnaround time.	High
BR-05	Record approve, decline, and more-information decisions with reason categories.	Supports consistent simulated decision reporting.	High
BR-06	Provide operational KPIs for volume, status, aging, and turnaround time.	Supports management review and data-driven improvement.	Medium

8. Functional Requirements

ID	Functional Requirement	Related BR	Priority
FR-01	Authorized users can create, save, and submit a loan application.	BR-01, BR-02	High
FR-02	The system validates mandatory application details before submission.	BR-01	High
FR-03	Users can view a document checklist and record document status.	BR-03	High
FR-04	A lending manager can assign or reassign applications to loan officers.	BR-04	High
FR-05	Loan officers can request additional information and record decision reasons.	BR-03, BR-05	High
FR-06	Authorized users can view application status history and ownership history.	BR-02, BR-04	Medium

ID	Functional Requirement	Related BR	Priority
FR-07	The system provides KPI views for volume, status, aging, and turnaround time.	BR-06	Medium

9. Non Functional Requirements

ID	Category	Requirement	Priority
NFR-01	Performance	Application details and queue views display within 3 seconds under normal project conditions.	High
NFR-02	Security	Users sign in with unique credentials and see only functions permitted by their role.	High
NFR-03	Auditability	The system retains application status, assignment, and decision history.	High
NFR-04	Usability	The application form and status labels use clear, consistent wording.	Medium
NFR-05	Availability	The project scenario assumes availability during normal business hours.	Medium

10. Business Rules

ID	Business Rule	Related Requirement
RULE-01	Each application has a unique Application ID.	BR-01
RULE-02	An application cannot move to Under Review until required mandatory fields are complete.	BR-02, BR-03
RULE-03	Only an assigned loan officer can record a review decision.	BR-04, BR-05
RULE-04	Every approve or decline decision requires a decision reason category.	BR-05
RULE-05	An application with missing information must show the next action before review continues.	BR-03

11. Assumptions and Constraints

- Assumptions: stakeholders can validate the simulated workflow; project tools and structured simulated data are available.
- Constraints: no real bank systems, policy documents, confidential data, or production implementation are assumed.

12. Acceptance Criteria

ID	Acceptance Criterion	Related Requirement
AC-01	Authorized users can create, save, submit, and view a loan application.	FR-01
AC-02	The system identifies missing mandatory application information before submission.	FR-02

ID	Acceptance Criterion	Related Requirement
AC-03	Users can see document status and record a request for missing information.	FR-03, FR-05
AC-04	Managers can assign an application and the assignment appears in the officer queue.	FR-04
AC-05	Loan officers can record a decision with a valid reason category and status history.	FR-05, FR-06
AC-06	The KPI view shows application count, current status, aging, and average turnaround time.	FR-07

13. Risks and Dependencies

ID	Risk	Impact	Mitigation Action
R-01	Simulated data may be incomplete or inconsistent.	High	Validate and clean data before analysis.
R-02	Requirements may change during the project.	Medium	Confirm scope and maintain a prioritized backlog.
R-03	Decision rules may be interpreted differently by stakeholders.	High	Document agreed reason categories and business rules.
R-04	No real bank systems or confidential data are available.	Medium	Keep the project clearly labeled as a simulated case study.
